SpringerMaterials

The world's largest resource for physical and chemical data in materials science

SpringerMaterials contains more than 500,000 online documents covering 3000 properties spread across 250,000 materials and chemical systems!

SpringerMaterials is a comprehensive resource of compiled information about the properties of materials that is critically reviewed and presented in an online format. SpringerMaterials contains information from numerous sources and is principally based on the Landolt-Börnstein Series, the unique and authoritative data collection in the area of physical sciences and engineering. SpringerMaterials also contains a number of subset databases catering to the specific needs of researchers and engineers. The databases in SpringerMaterials include:

- The Landolt-Börnstein Database
- The Linus Pauling Files
- A subset of the Dortmund Databank of Software and Separation Technology
- The Adsorption Database
- Polymer Thermodynamics Database
- MSI Database

SpringerMaterials also contains SpringerMaterials Handbooks on subjects like nanomaterials , the Handbook of Polymers, and more!

SpringerMaterials is looking for contributors in the field of Nanomaterials. If you would like to contribute data-intensive edited or authored books or electronic databases to the database we would love to hear from you.
